

## **PRESS RELEASE**

### **Greater Processing Capacity**

February 13, 2007, Huntsville, AL, Ecolotec today announced a major design change in the bowl size of the Ecolotec MW 200. The capacity of the bowl in the past had been 250 pounds per hour. The bowl of the processor has been increased to 350 pounds per hour. “This is a significant increase without increasing the foot print of the machine or the cost” stated Gary Gilliam, Executive Vice President of Ecolotec. We are excited about this increase because it means that a hospital can process more medical waste in a shorter amount of time.

Ecolotec manufactures medical waste processing equipment for hospitals around the world.
